DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 3, 5-9 and 11-14 are allowed.

The following is an examiner's statement of reasons for allowance: none of the prior art of record appears to teach, fairly suggest or render obvious the invention of claim 1. In particular of the biphenyl additive range in the non-aqueous electrolyte being from 0.001-0.8% weight.

Upon further consideration of JP '258 the prior art of record does not appear to teach or fairly suggest the biphenyl additive in the range recited in the instant claims. The lowest value for the biphenyl additive of JP '258 appears to be 2 weight percent which is held to be significantly greater than the upper limit of 0.8 weight percent in claim 1.

According to the instant application, if the amount of the biphenyl derivative exceeds the upper limit of 0.8 wt %, the incorporation of the biphenyl derivative does not give satisfactory improvements of the battery performances such as high electric capacity and high cycling performance. If the amount of the biphenyl derivative is less than 0.001 wt %, no noticeable improvement is observed (page 4, ll. 19-29). Most notably in this range is the improved cycle retention (Table 1).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
